

# Multi-component molded parts

## Development and Manufacturing

From the sketch of the plastic part over prototype and mold making (in cooperation with companies of our region) until mass production we offer general solutions for manufacturing of multi-component parts.

## Additive molding process

- Two-color molded parts
- Hard / soft composites
- Assembly injection molding
- Realization by conversion technology

## Sequential molding process (sandwich)

- Sandwich construction of molded parts
- Decorative surface for main component
- For the main component we use
  - Regrind
  - Chemically blown foam
  - Electrically conducting materials
- Decorative effects by marbling
- Insert of a two-component plates system by A + E Produktionstechnik
